

MODIFICATIONS TO SCHOOL BUILDINGS AND EQUIPMENT

The Board is charged with legal responsibility to maintain all school buildings and equipment. While it is recognized that there are, from time to time, legitimate reasons why school employees need to make modifications to school buildings and/or equipment, such modifications must be carefully planned so as to insure that they: (1) meet the requirements of state regulatory agencies such as the Fire Marshall and the Health Department; (2) do not create a hazard to students or employees; or (3) create problems to the efficient and economical cleaning and maintenance of the building.

Therefore, no one shall modify Hardy County school buildings or equipment without permission of the Principal and Maintenance Director. Before granting such permission the Principal and Maintenance Director shall study the proposed modifications to determine that it is not prohibited by building codes or other regulations of state or federal agencies; that it does not damage the structural integrity, exiting, maintenance, cleaning, and use of the building; and that it will accomplish its purpose in a practical manner.
